🔧 WORK PROGRESS REPORT

Name: Ishimwe Serge
Position: Frontend Developer
Date: 13th August 2025, 11:59 PM CAT

📝 INTRODUCTION

Today, I focused on improving the **Aby Inventory Management** system, with the main goal of enhancing navigation and fixing display issues to create a smoother and more reliable user experience. These updates targeted both **admin** and **employee** users to ensure the system feels intuitive, professional, and easy to use across all pages.

✅ KEY TASKS COMPLETED

1. NAVIGATION ENHANCEMENTS

- Added clear navigation links on both the **Admin** and **Employee** login pages to allow users to easily go back to the previous page.

- Improved the workflow so users don't need to rely on the browser back button.

- Made the login experience smoother, reducing confusion for first-time and returning users.

2. PRODUCT DETAILS FIX

- Fixed a display issue on the **View More** product page where some product details were previously not showing correctly.

- Ensured that all product information, including images, descriptions, and specifications, now loads properly without errors.

- Enhanced the presentation of product data to make it clearer and more professional for end users.

📚 SUMMARY

The updates implemented today significantly improve the **Aby Inventory Management** system. Navigation is now more user-friendly, allowing smoother transitions between pages, and product details are reliably displayed, providing a professional and error-free experience. These enhancements make the system more intuitive, helping both admins and employees complete their tasks efficiently.
